griptech

MOBILE WEIGHING | SmartBox

Features:

▸ Data transfer via 4G LTE or WLAN
▸ Archive up to 1,000,000 weighings protected against manipulation
▸ Data transfer to ERP systems through special programming
▸ RGB light signals for status monitoring
▸ Location-independent real-time access to weighing data

MOBILE WEIGHING | SmartBox

The Griptech SmartBox - BLUE, SMART, STRONG

In a time where all our devices are constantly connected, it is ubiquitous that we have access to all our data at any time. Griptech's SmartBox, in combination with a Griptech weighing system, turns your truck into a connected measuring unit. Weighing data, scanner information, ID, date, time, gross, net and tare weights as well as commodity groups can be securely exported, edited (Excel) and stored in the standard configuration. Real-time access regardless of location, the show/hide function and free sorting ensure user-friendly list application and editing. The standard memory capacity is 32GB and is capable of archiving over 1.000.000 weighings safely and protected against manipulation. The connection of hand scanners or printers allows direct input and output of data during the handling process.

Even in the basic version, many application possibilities can be realised, but the real strength of the SmartBox lies in the possibility of special programming by our IT specialists. In this way, the SmartBox can be adapted to your application purpose on the software side. There are almost no limits to the possibilities.

Importing your product data and piece counting based on the determined weights are done in no time. Via WLAN or 4G LTE, the data recorded by the
stacker can be fed back to your merchandise management system in real time. For example, your system can only release pallets for loading when the
corresponding quantities have been picked. With the help of a label printer, the corresponding shipping label is printed only then. In this way, you can ensure accurate goods handling in a fully automatized way.
This is just one application example of many. With the SmartBox from Griptech, you turn your forklift into the data collection unit of tomorrow!

Technical data:
‣ Protection class: Casing IP67, Plug IP65
‣ Casing: ESD and vibration-protected casing
‣ Operating temperature range: - 25 to + 70 ° C
‣ Conformity: 1907/2006/CE (REACH), 2015/863/UE (RoHS III)

Standard version:
‣ Incl. connection cable to the display unit
‣ RGB (LED) (62x15x19 mm) for optical status monitoring
‣ 4G LTE antenna
‣ I Incl. USB stick for programming the WiFi access file and operating instructions
‣ RTC on Board

Options:
‣ Bluetooth and / or RS232 printer
‣ Scanner via Bluetooth
‣ Data export via download and USB interface

Mounted protected in the forklift

Connection to tablet possible

RGB light signals for status monitoring

Optional with GripLine printer
