## MULTI PALLET HANDLER | DPKI

### Features:

- ▶ For large forklifts
- ▶ Double shaft guided multi-pallet fork
- ▶ Integrated into the mast with separate side shift
- ▶ Distance between fork pairs is maintained by hydraulic cylinders
- ▶ Available with an optional load holder to stabilize the load

# MULTI PALLET HANDLER | DPKI

For large forklifts designed to handle 2–4 pallets

For loading two or four pallets one behind the other, e.g. in the beverage sector, we build a multi pallet handler with 2400 mm long forks guided by double shafts. For optimum visibility, the devices are integrated into the mast and have a separate sideshift. The distance between the pairs of forks is maintained by hydraulic cylinders (no gas pressure cylinders). This series is also available with an additional load holder to stabilize the load.

## Features:

- › Integrated into the mast with separate side shift
- › Double shaft guided multi-pallet fork
- › Distance between fork pairs is maintained by hydraulic cylinders
- › Available with an optional load holder to stabilize the load

## Multi pallet handlers 2-4 pallets incl. separate sideshift, fork length L=2400 mm (2 functions)
